Installation Instructions for
Vertical Blind

In order to have an accurate installation it is necessary to follow these simple steps.

1. Tools needed
   Marker or pencil, measuring tape, screwdriver and screws (chose the best one for the job).

<table>
<thead>
<tr>
<th>Screws</th>
<th>Sheetrock screws</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Flat or Phillips head screw 1 ½” (included)</td>
</tr>
<tr>
<td>Alternative screws</td>
<td>These screws are used on concrete and hard surfaces</td>
</tr>
<tr>
<td></td>
<td>(screws not included)</td>
</tr>
</tbody>
</table>

2. Bracket Installation *(Before installing Brackets confirm with the chart below to see how many you will need per blind.)*

   4” Intermediate measurement 4”
**Support amount**

<table>
<thead>

</tr>
</tbody>
</table>

**Wall Installation**

1. With pencil mark were you will be marking the holes. for the installation of the brackets.
   
   *Should be 4” from each end of the rail.*

2. With the drill, make the holes in the wall, then secure the brackets with the screws.

**Placing the rail on the supports**

1. 3. Once the brackets have been positioned, attach the rail to the brackets. Fit the front of the rail and then push up on the back. Once you hear a CLICK, you’re finished.

**NOTE:** For ceiling or in frame installations, it’s recommended to install the valance with its respective sides first (unless an inside mount, then leave the sides off).
## Ceiling or inside mount installation

2. With a pencil, mark the holes where the supports are going to go. *Should be 4” from each end of the rail.*

3. With the drill, make the holes in the ceiling, then secure the brackets with the screws.

### Placing the rail on the brackets

4. Once the brackets have been positioned, attach the rail to the brackets. Fit the front of the rail and then push up on the back. Once you hear a CLICK, you’re finished.

---

**NOTE:** For ceiling or in frame installations, it’s recommended to install the valance with its respective sides first (unless an inside mount, then leave the sides off).

### 3. Valance installation *(This procedure applies to square Valance or round Valance)*
4. **Orientation of transparent hooks**

Once the rails have been installed, orient the hooks from which the slats will hang. Make sure all hooks are facing the same direction.

Make sure to turn the hooks in the same direction by pulling the chain. You can keep pulling the chain even when it seems to stop, that will ensure all of the hooks are aligned with each other.
5. Placing Slats

With all the hooks oriented in the same position, insert the slats one by one in each hook, so that they are perpendicular to the rail.

6. Blind Control

**NOTE:** When opening and closing the blind, always do so with the slats perpendicular to the rail, to prevent damage to the slats and ensure the correct operation of the blind.

**With Cord**

Pull the front of the chain to turn the slats in one direction, or the back to turn them in the opposite direction.

Pull the front of the cord to slide the slats one way, or the rear part to move it in the opposite direction.
**With Wand**

Twist the wand to turn the slats, and twist it the other way to turn them in the opposite direction.

To move the slats horizontally, simply pull the wand one way or the other.

When opening and closing the blind, always do so with the slats perpendicular to the rails to prevent damage to the slats and ensure the correct operation of the blind.
7. Maintenance

Slats should be cleaned periodically, with a duster or vacuum to remove dust.

If slats contain stains, you can use a damped cloth (use only water).
Start at the top and work your way to the bottom. Be careful not to pull off the slats.
