## Installation & Maintenance Instructions

### Getting Started

Remove the blind from the package. Be sure to keep the packaging until the blind operates to your satisfaction. Please take a moment to review the following installation guide for proper installation.

### Recommended Tools
- Measuring Tape
- Pencil
- Level
- Screwdriver
- Power drill (1/4” hex driver and drill bit)

### Step 1: Bracket Installation

Mark the bracket location on the mounting surface. For easy installation and proper blind operation, use a level to ensure all brackets are aligned.

Allocate min. distance from wall face to the backside of the brackets. Peel off the double-sided adhesive tape on the bracket and stick the bracket at the marked location. Use two 1 1/4” mounting screws to secure bracket. Use wall anchors for drywall or plaster wall.

</tbody>
</table>

Valance Return Connector is provided only when returns are required.

### Step 2: Install the Valance Clip (for valance option)

- Attach the valance clip plug into the receptor. Refer to the right drawing for the plug position.

Attach the valance clip plug and receptor into the channel on the backside of the valance. Attach the valance return if needed. Hook the valance clip receptors onto the headrail and space them evenly.

Make sure receptors are not in obstructive position with the drum support or wand tilter inside the headrail and the brackets.

### Check Component / Hardware:

- Check your package for contents needed for proper installation.

- Installation bracket
- 1 1/4” Screw
- Hold Down Bracket (optional)
- Valance Clip Receptor (optional)
- Valance Clip Plug (optional)
- 3/4” Screw (optional)
- Valance Return Connector (optional)
- Wand
- With Modern Curved Valance (optional) No Valance Return

### Mounting Surface

### Installation Bracket Location

Semi-inside Mount (Bracket flush to wall)

With Valance and Valance Return (optional) No Valance Return

Outside Mount

Without Valance

Valance with Valance Return (optional)

With Modern Curved Valance (optional) No Valance Return

Step 1. Bracket Installation

Step 2. Install the Valance Clip (for valance option)

Without Valance

With Valance and Valance Return (optional)
Perform periodic simple cleaning of your blind will keep your blind looking its best for the years to come. There are two ways to clean. You can dust it with a duster or dusting mitten, or simply use a soft cloth slightly moistened with lukewarm water to wipe down the slats. You can clean it with the blind hanging on the window, or you can take it down completely. By tilting the slats down but not fully closed, you will be able to clean most of the top surface of each slat. Do not use detergent or abrasive cleaning solutions to clean the blind since it will likely cause damage to the blind.

Cleaning Instructions

- For blind without valance, attach the headrail to the brackets directly as below drawing.

- If valance is required, make sure the valance clip receptors are attached on the headrail before installing the headrail.

- Install the blind as below drawing for valance option.

Choose one of below ways to attach the headrail to bracket.

- Start with attaching the headrail front to the bracket first.

- Start with attaching the headrail back to the bracket first.

**Step 3. Install the Blind**

- For blind without valance, attach the headrail to the brackets directly as below drawing.

**Step 4. Assemble the Split Wand (if needed)**

For split wand, aim the wand at connector hole and push wand into hole till to the end.

**Step 5. Insert the Wand**

Insert wand tilt connector into the bottom of headrail till they are clicked. Do not take down the wand after installed.

**Step 6. Attach the Valance (for valance option)**

Attach the valance to the headrail by inserting the plugs into the receptors.

- Finalize valance installation position first.
- Attach the valance to the headrail by inserting the plugs into receptors as below drawing.

If the valance return is needed, join the valance return with valance by valance return connector first, and then attach the valance together with valance returns to the headrail.

**Modern Curved Valance with Valance Returns (optional)**

- For inside mount
- For outside mount and semi-inside mount option

**Additional Attachments**

- Hold down brackets (if included)
  - Attach the hold down brackets against a flat surface, horizontally or vertically, parallel to the bottom rail. Make sure the protruding area is aligned with the hole on the side of the bottom rail. Secure the hold-down bracket into the bottom rail on both sides to keep blinds in desired location.

- Inside Mount
- Outside Mount

**Operating Your Blind**

- **Tilt wand**
  - Rotate wand to attain desired slat position

- **Lower the blind**
  - The slats need to be opened at any angle and keep even when pulling the bottom rail down by hand.

- **Raise the blind**
  - Gently tilt the slats toward you at 45 degree before lifting the bottom rail up by hand.

**Remove the Blind**

Remove the valance and valance clip plugs away from the receptors first if valance is included.

**Remove the blind from brackets**

- Without valance
- With valance
