## Size Limitation- By Lift

| Type of shape | Lift System | Min Width (X) | Max | Min | Max |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Width | Length | Length |
| Single Shade | Continuous Cord Loop | 8" | 118" | 12 " | 144" |
|  | Cordless | $18 \prime$ | 96" |  | 96" |
|  | SmartRelease ${ }^{\text {TM }}$ | 12" | 118" |  | 144" |
|  | Motorized | $14 \prime$ | 96" |  | $144 \prime$ |
| Dual Shade | Continuous Cord Loop | 8" | $96 "$ | 12 " | $96 "$ |
|  | Cordless | $18 \prime$ |  |  |  |
|  | SmartRelease ${ }^{\text {TM }}$ | 12" |  |  |  |
|  | Motorized | $14 \prime$ |  |  |  |
| Coupled Shade | Continuous Cord Loop | $24 "$ | 236" | 12 " | 144" |
|  | Motorized | $26^{\prime \prime}$ | 192" |  |  |

1. Max width goes by fabric width.
2. For select fabrics that can be railroaded, after the fabric has been railroaded, the max shade height is approximately the original fabric width -12 "
3. For coupled shade, left shade width plus right shade width needs to equal to the total width.

Note: Cordless has a special width and height size limitation as shown on the right.

| Width (X) | Max Height |
| :---: | :---: |
| $18^{\prime \prime} \leq x \leq 19^{\prime \prime}$ | $48^{\prime \prime}$ |
| $19^{\prime \prime}<x \leq 24^{\prime \prime}$ | $72^{\prime \prime}$ |
| $24^{\prime \prime}<x \leq 96^{\prime \prime}$ | $96^{\prime \prime}$ |

## Size Deductions

## Inside Mount:

Shade width=Order Width $-1 / 8^{\prime \prime}$
(Default Top Mount)
Shade height=Order Height
Deductions for Roller Shade with a common valance:
Final left shade width=left shade order width $-1 / 8^{\prime \prime}$
Final center shade width=center shade order width $-1 / 8^{\prime \prime}$
Final right shade width=right shade order width $-1 / 8^{\prime \prime}$

## Outside Mount:

Shade width=Order width
Shade Height=Order Height
Deductions for Roller Shade with a common valance:
Final left shade width=left shade order width
Final center shade width=center shade order width
Final right shade width=right shade order width

Note: For outside mount, to minimize light leakage, the shade should be overlapping the window opening at least $2^{\prime \prime}$ on each side and at the bottom.

## Telescoping Issue

Shades over 3 to 1 ratio length vs width may experience a telescoping (tracking) issue, which is not considered a defect.

## Shade Size Definition

Shade Width: Distance from end cap to end cap.
Shade Height: Distance from top of headrail to bottom of shade when fully open.
